

Case Study: One of Canada's largest energy companies.

“We chose F5 to support our VMware View environment based on the integrated security, access, and optimization capabilities of the BIG-IP platform,” said one customer. “F5’s technologies, including APM and iRules, give us the flexibility we need to support users and scale our virtual desktop infrastructure as needed. Another key advantage of going with F5 is their support for Apple iOS devices. Full iPad access with VMware View was a must-have for us, and F5 helped make this a reality”

Customer Overview:

Integrated energy and energy services company that provides upstream, midstream, and downstream services around the globe.

Vertical: Energy

Location: Calgary, Alberta, Canada

Providing a scalable and secure remote access platform for our customer’s VMware View deployment. This included all internal, remote, and mobile (iPad) users. (6000 seats total). Being able to provide the same levels of access and user experience to all users was critical. Security and authentication are extremely important to the customer, and our APM single sign-on capabilities secured and simplified the logon experience for all users, beyond expectation.

F5 APM & BIG-IP LTM Benefits:

- ❖ The ability to provide remote access, authentication security, and server load balancing, from the same physical platform.
- ❖ The ability to provide secure and reliable authentication services to local, remote, and mobile users, including iPad.
- ❖ The ability to provide a consistent user experience for all methods of VDI access.
- ❖ Rapid deployment of the LTM and APM modules.
- ❖ APM single sign-on capabilities secured and simplified the logon experience for all users.
